

TimeON

Ease per second tarification for everefing

Problem:

Payment for services and various services is carried out by prepayment or by subscription with a monthly debit, which is often not convenient for the user due to the fact that the user is not sure of the quality of the service provided or the content provided.

Do you need an online lawyer's consultation? - You pay in advance
If you want to use a new service to help with development, you sign up for a subscription

You get a paid content - You pay the entire amount
Prepayment reduces conversion.

Post-payment is unprofitable for business.
There is no guarantee that the customer will pay.

Solution:

Per-second billing of anything, via TON payment channels.

Сфера применения:

Telemedicine

Experts

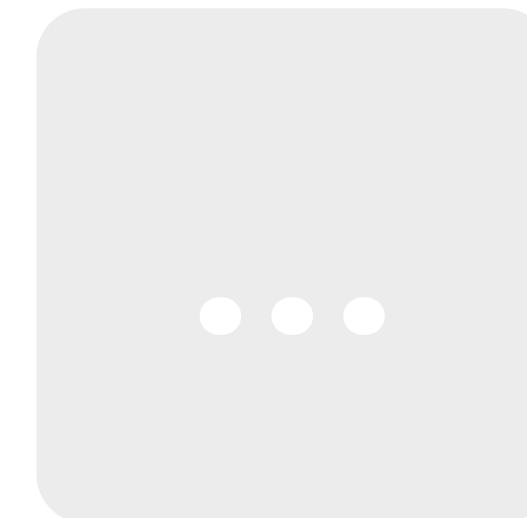

Webinars and training

Services

Webcam models

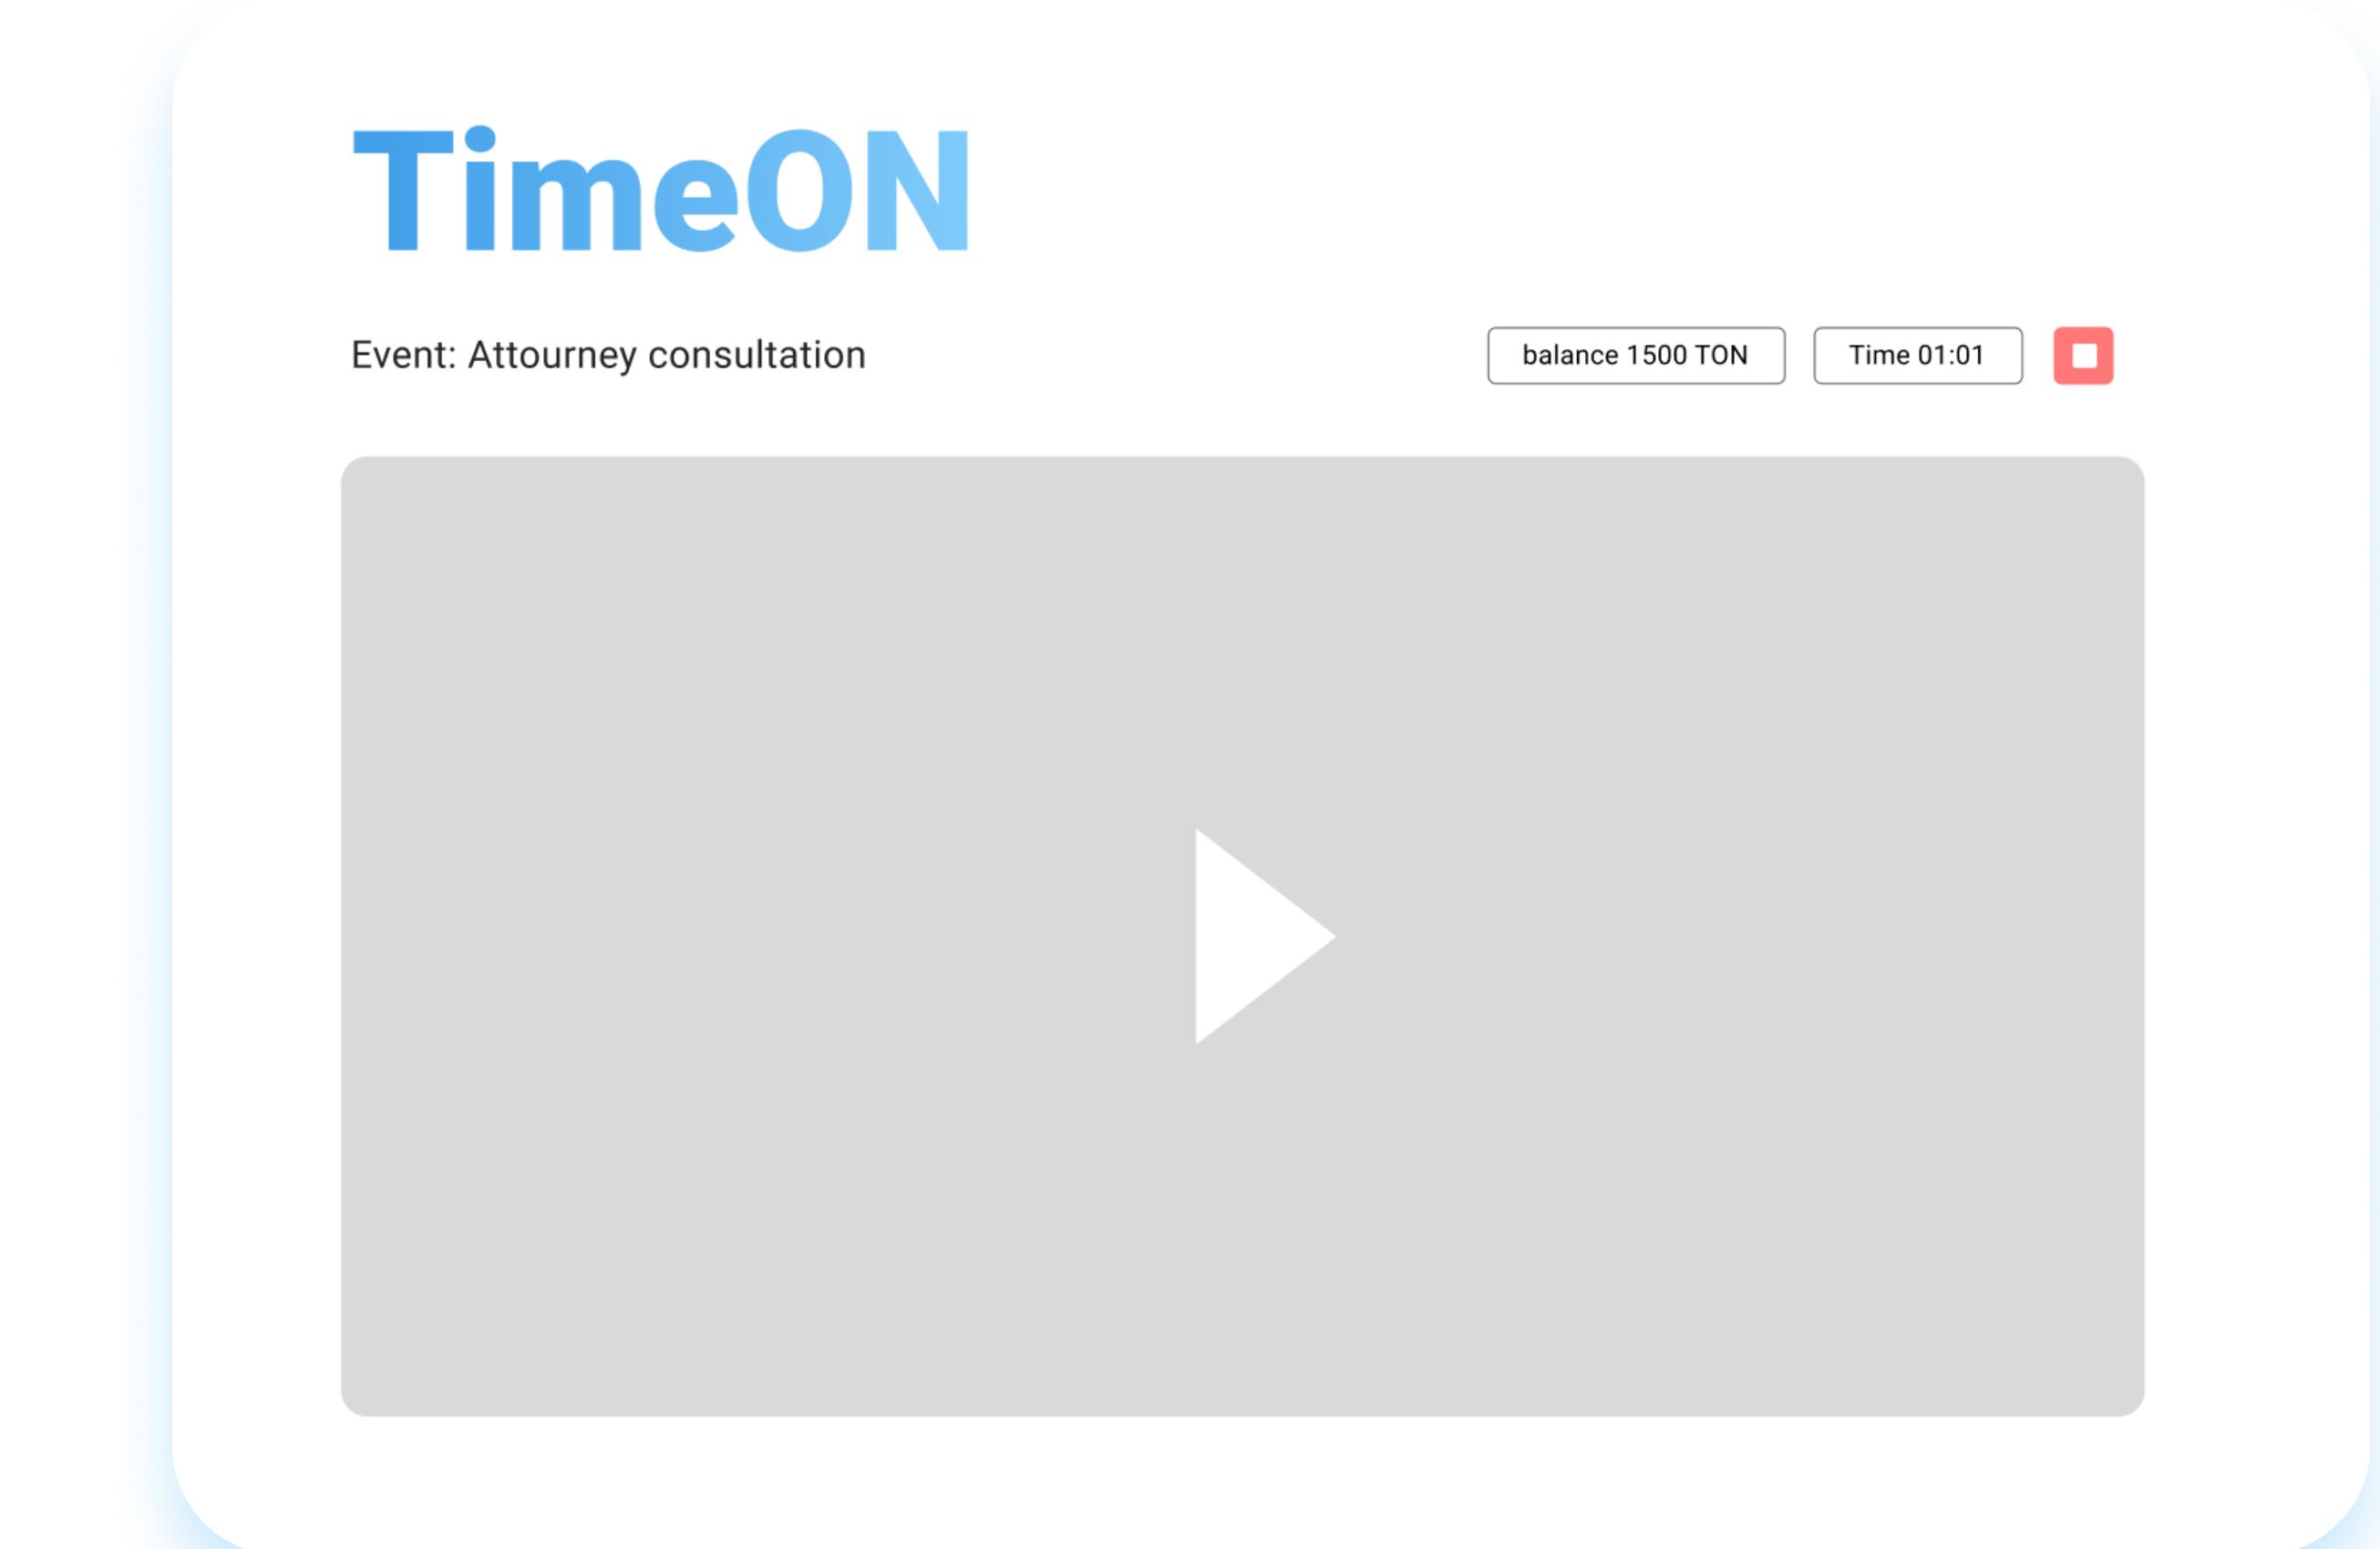

And other

MVP

Online meeting of the client and the expert

1. The expert creates a new meeting, specifies its data and cost.
2. Sends the link to the client
3. The client signs the contract and starts the meeting
4. During the meeting, either party can complete it and make an instant recalculation.
